

BRIGHTCHAMPS | AI FORWARD DEPLOYED ASSOCIATE | MEMO

1. THE LEAK — WHERE MONEY IS BEING LOST

Stage	Leads	Conversion
Leads	5,000	—
Demo scheduled	3,229	64.58%
Demo joined	2,060	63.80%
Demo completed	1,786	86.70%
Converted	362	20.27%

- **Primary leak:** Scheduled → Joined. 1,169 scheduled demos did not join (36.20% no-show rate) — materially larger than the 274 leads who joined but did not complete. Completed-demo → conversion rate is 20.27%, a potential future lever.
- **Rupee sizing:** Scheduled conversion rate is 11.21% (362/3,229). Applied to 1,169 no-shows: ≈ ₹78,63,326 over two months (₹39,31,663/month) — an opportunity estimate, not realized lost revenue.

2. THE LEVER — WHAT TO LAUNCH IN TWO WEEKS

- **Two-touch no-show recovery:** reminder before scheduled demo, then an immediate, concise reschedule message after a no-show.
- **Execution:** use existing operational channel (CRM / WhatsApp / Sheet workflow); place unresolved leads into the existing rep's recovery queue.
- **System logic:** AI generates and personalizes messages; deterministic Python/business rules handle eligibility, prioritization, and measurement.

3. WHY THIS LEVER — AND WHAT WAS REJECTED

Option	Decision	Reason
More lead acquisition	Reject first	Upstream; does not recover already-scheduled demand and adds acquisition cost.
Improve demo completion	Defer	Only 274 joined demos fail to complete versus 1,169 no-shows.
Improve post-demo conversion	Next experiment	Large potential at 20.27%, but requires more sales-process change and has harder attribution in a two-week launch.
No-show recovery	Launch	Targets 1,169 lost scheduled opportunities with a fast operational loop and clear measurement.

4. ADOPTION RISK + MEASUREMENT

- **Biggest adoption risk:** reps may see the workflow as another follow-up queue and not act on it consistently.
- **MVP mitigation:** keep it simple — one prioritized queue, a ready-to-send message, a clear handoff.
- **Metrics:** Primary — scheduled joined rate. Secondary — reschedule rate, completed-demo rate, completed-demo conversion, incremental conversions, revenue per 1,000 scheduled demos. Guardrail — downstream conversion quality must not deteriorate.

5. BASELINE TO REGISTER BEFORE LAUNCH

Metric	Baseline
Scheduled joined	63.80%
No-show rate	36.20%
Joined completed	86.70%
Completed converted	20.27%
Scheduled converted	11.21%

SYSTEM DESIGN & AI INTEGRATION

- **Build:** a runnable Python/Streamlit prototype accompanies this plan — funnel dashboard, no-show recovery queue, transparent prioritization, Gemini 2.5 Flash message generation with guardrails, rep handoff actions, and an intervention sensitivity simulator. The AI does not invent names, reasons, prices, discounts, or availability.
- **AI tools used:** ChatGPT for data analysis, hypothesis/lever comparison, prompt design, and prototype generation. Gemini 2.5 Flash for natural-language recovery-message generation in the prototype. Quantitative baseline calculated from the supplied CSV dataset.
